The graph shows three linear functions on a coordinate plane with x and y axes ranging from 0 to 10. The functions are:

- $f(x) = -x + 10$ (A line with a negative slope of -1, passing through (0, 10) and (10, 0).)
- $g(x) = -0.5x + 5$ (A line with a negative slope of -0.5, passing through (0, 5) and (10, 0).)
- $h(x) = -2x + 10$ (A line with a negative slope of -2, passing through (0, 10) and (5, 0).)

All three functions intersect at the point $(4, 2)$.
